

IIT Bhilai Welcomes Fresh Batch of MSc Candidates

The Indian Institute of Technology Bhilai organised an orientation program for the new batch of MSc students on August 16, 2020. Face to face educational activities have come to a standstill due to the COVID-19 pandemic. Despite these trying times, it is heartening for us all to see that a new journey is about to start for selected MSc candidates at one of the premier institutes of India. Keeping in mind the COVID-19 advisories, the Institute organised the orientation program online for the newly inducted students.

The program was graced by Prof. Rajat Moona, Director of IIT Bhilai who welcomed the students on board and said that regular online classes will help the students get acquainted with their courses and make the best of the pedagogy practiced at the Institute. The Faculties-in-Charge of Student Affairs, Academic Affairs, as well as Staff Members introduced the students to the various programs and departments of the Institute, including life at IIT Bhilai, health facilities, and the online academic activities. Details about the development of the permanent campus was also shared by Mr. Srinivas Maneem, Assistant Executive Engineer. During the orientation the students also had the chance to interact with their mentor students and faculty members through Webex. The registration process for the newly inducted students was also completed online.

IIT Bhilai is thus rapidly adapting to the changing needs of students and continuing to provide world-class education through online platforms to bridge the academic hiatus in the country caused by the Coronavirus. Not only has the university organized various online events over the course of the last several months, but the faculty members are also offering new courses for the MSc. students, such as Quantum Chemistry, Computational Physics, and Linear Algebra. Students are no doubt glad and relieved to be starting or continuing their academic journeys, which is no doubt a crucial part of our lives.
